

ABSTRACT OF THE DISCLOSURE

A repository system for media publishing, comprising: a plurality of storage devices configured to store a plurality of media items, each storage device configured to store a
5 different type of media item than that of other storage devices in the plurality of storage devices; and metadata information relating to the media items stored in the plurality of storage devices, wherein the metadata information enables hierarchical organization of the media items so that the media items can be relatively easily accessed, moved, added, and deleted.
